Probability Review 3 - Univariate Random Variables and Distributions

Donald E. Brown

School of Data Science
University of Virginia
Charlottesville, VA 22904

Random Variables

Univariate
Probability
3/ 19

D.E. Brown

Random Variables

Discrete Random
Variables

Continuous Random
Variables

Random variable - function from sample space to \mathbb{R} or a subset of \mathbb{R}

Discrete random variable - at most a countable number of values

Continuous random variable - uncountable set of possible values

Discrete Random Variables

Univariate
Probability
4/ 19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

Probability mass function: $p(x) = P(A = x)$

Cumulative distribution function: $F(a) = \sum_{x_i \leq a} p(x_i)$

Bernoulli and Binomial Distributions

Univariate
Probability
5/ 19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

- Bernoulli:

$$X = \begin{cases} 1 & \text{with probability } p \\ 0 & \text{with probability } 1-p \end{cases}$$

- Binomial: Suppose independent Bernoulli trials with probability p , then the probability of x successes in N trials is

$$p(x) = \binom{N}{x} p^x (1-p)^{N-x}$$

Binomial Distribution

Univariate
Probability
6/ 19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

Poisson Distribution

Univariate
Probability
7/ 19

D.E. Brown

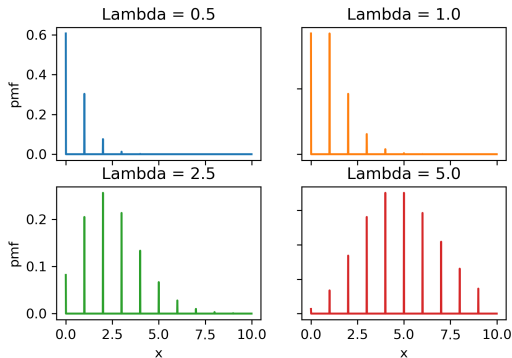

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

Poisson: For $\lambda > 0$ and some $x = 0, 1, \dots$,

$$p(k) = e^{-\lambda} \frac{\lambda^x}{x!}$$

Continuous Random Variables

Univariate
Probability
8/ 19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

Probability density function : For $A \subset \mathfrak{R}$ with $f(x)$ such that

$$P(X \in A) = \int_A f(x) dx$$

Cumulative distribution function : $F(a) = \int_{-\infty}^a f(x) dx$

Example : Suppose $f(x) = x, x \in (0, \sqrt{2})$ and $f(x) = 0$ otherwise.

Graph $f(x)$ and $F(x)$

Example

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

- Uniform:

$$f(x) = \begin{cases} \frac{1}{b-a} & \text{if } x \in [a, b] \\ 0 & \text{otherwise} \end{cases}$$

Uniform Distribution

Univariate

Beta Distribution

Univariate
Probability
12/ 19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

- Beta: For $a > 0, b > 0$ and $x \in [0, 1]$

$$f(x) = \frac{1}{B(a, b)} x^{a-1} (1-x)^{b-1}$$

where

$$B(a, b) = \int_0^1 x^{a-1} (1-x)^{b-1} dx$$

Beta Distribution

Variables

Discrete Random
Variables

Continuous Random
Variables

Gamma Distribution

Univariate
Probability
14/19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

- Gamma: For $\lambda > 0, \alpha > 0$ and $x \geq 0$

$$f(x) = \frac{\lambda^\alpha e^{-\lambda x} x^{\alpha-1}}{\Gamma(\alpha)}$$

where

$$\Gamma(\alpha) = \int_0^\infty e^{-x} x^{\alpha-1} dx$$

for $\alpha \in \mathbb{Z}^+$ (i.e., a positive integer)

$$\Gamma(\alpha) = (\alpha - 1)!$$

Also

$$B(a, b) = \frac{\Gamma(a)\Gamma(b)}{\Gamma(a+b)}$$

Gamma Distribution

Univariate

Variables

Continuous Random
Variables

Gaussian Distribution

Univariate
Probability
16/19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

- Gaussian: For $\mu \in \mathbb{R}, \sigma^2 > 0$ and $x \in \mathbb{R}$

$$f(x) = \frac{1}{\sqrt{2\pi}\sigma} \exp\left(\frac{-(x - \mu)^2}{2\sigma^2}\right)$$

- Suppose $X \sim N(\mu, \sigma^2)$ what is the distribution of $Y = aX + b$?
- $Y \sim N(a\mu + b, a^2\sigma^2)$

Gaussian Distribution

Univariate
Probability

Variables

t Distribution

Univariate
Probability
18/ 19

D.E. Brown

Random
Variables

Discrete Random
Variables

Continuous Random
Variables

- t Distribution: For $\mu \in \mathbb{R}$, $\hat{\sigma}$, $\nu > 0$ and $x \in \mathbb{R}$

$$f(x) = \frac{\Gamma\left(\frac{\nu+1}{2}\right)}{\Gamma\left(\frac{\nu}{2}\right) \sqrt{2\pi} \hat{\sigma}} \left(1 + \frac{1}{\nu} \frac{(x - \mu)^2}{\hat{\sigma}^2}\right)^{-\frac{\nu+1}{2}}$$

- μ is location, ν is the degrees of freedom, and $\hat{\sigma}$ is the scale
- As $\nu \rightarrow \infty$ the distribution converges to the Gaussian
- For $\nu = 1$ known as the Cauchy distribution
